

Environmental Policy

Retail Sensing is a company that specializes in providing business intelligence solutions for companies around the world. We manufacture Video Turnstile systems that count people, vehicles and provide smart city sensing equipment. Our roots can be traced back to Biodata Ltd, a data acquisition and control specialist since 1973. In 2012, Biodata decided to form a new company dedicated to counting people and related specialisms. Biodata's people counting R&D and software teams moved to the new company. Our head office, design, and production facilities are located in Manchester in the UK.

As an electrical manufacturing company, we acknowledge the environmental impact of our operations. We recognize that our manufacturing processes and the products we develop have the potential to contribute to environmental degradation. Therefore, we are committed to minimizing our environmental footprint and to promoting sustainability through our operations.

As an electrical manufacturing company, we commit to adhering to the following key commitments:

- Complying with all relevant environmental legislation, regulations, and industry standards.
- Promoting the efficient use of resources and minimizing waste, energy consumption, and greenhouse gas emissions.
- Implementing environmentally friendly design and production processes for our products.
- Promoting environmentally responsible behavior among our employees and stakeholders.

In addition to our key commitments, we are committed to reaching net zero by 2030. To achieve this goal, we will:

- Identify and reduce our direct and indirect greenhouse gas emissions across our operations, including our supply chain.
- Increase our use of renewable energy sources and promote energy efficiency measures.
- Develop sustainable packaging solutions for our products, using recycled materials and minimizing waste.
- Incorporate sustainable materials in our products and packaging, where feasible.
- Regularly review and report on our progress towards achieving our net zero commitment.

This environmental policy will be reviewed regularly by our directors, Graham Collins and Brian Osbourne, to ensure that it remains up to date and relevant to our operations. It will be communicated to all employees and stakeholders, including customers, suppliers, and contractors, by David Collins.

This is version 1.0 of our environmental policy, dated March 30, 2023.
